Good morning,

This email is to serve as notification that I have (on behalf of DERR and EPA Region 8, per our advisory role to DWQ and DOGM), completed a review of the document entitled:

Rio Tinto Barneys Canyon, Barneys Canyon Mine - Heap Leach Area, Characterization Study Completion Report/Soil Removal Work Plan (dated August 2015, Received September 21, 2015).

At this time, I find the document acceptable (having previously provided an acceptability notice on Appendix F, Risk Assessment, in cooperation with DWQ). Please keep DERR informed on progress with implementation of the response actions. If you have any questions, please let me know.

Best Regards,

Douglas Bacon
